## Company profile

Since 1960 FTT has successfully been working in the field of cinema technology. Over this period, we have been able to prove our know-how and efficiency by implementing numerous projects in both, multiplex centres and traditional movie theatres - and that not only in Germany, but throughout Europe.

Today, our national and international clients benefit from subsidiaries in Benelux, Great Britain, Ireland, Austria, Switzerland and Eastern Europe. Our pan-European distribution network provides for tailor-made and individual solutions on the spot. Our range of services does not only include the supply of high quality products but also project planning by our in-house technical drafting department as well as professional installation and, last not least, after sales maintenance and emergency services.

We have gained ample experiences in the field of preparation, planning and installation of digital cinema equipment over the past two years in particular. In Germany, Austria and the Netherlands we have carried out more than 150 2k installations with projector models of the companies Christie, Barco and Cinemeccanica as well as Doremi and XDC servers. On some sites, digital advertisement also came into operation. Furthermore, we had the opportunity to support the first 4k installations in Germany and Austria with Sony.

For more than a year, FTT also services the hotline for XDC installations in Germany, Austria and the Netherlands. In so doing, a prompt and individual reaction to potential incidents is given. Moreover, we provide training seminars for technical projection staff on request. The seminars comprise background information on d-cinema as well as an introduction to various projector and server models.

Alongside with digital cinema technology digital cinema in 3D has more and more become one centre of focus. We advise our customers on the choice of a suitable 3D system for their individual locations. Whether active or passive 3D technology – we are experienced in installation and support of all models that are currently available on the market. In addition, we offer 4D / 5D and 6D digital systems in co-operation with a partner. Therefore, we are in a position to offer our customers the whole range of digital cinema equipment.
